Placement review for Kabir Mehta

Target: Full Stack Developer. Generated 20 Oct 2026. Every score comes from the written MSOT benchmarks; nothing is guessed.

86 / 100 Placement ready

Do these five things next

1 **ShopLite: README with setup steps and screenshots** +1.3
Replace the auto-generated README (Create React App / Vite / Next.js) with your own.

2 **Profile README** +1.2
Expand the profile README: what you're focused on, your stack, and links to 2–3 best projects.

3 **Specific headline** +0.8
State the role you want (e.g. 'Backend Developer', 'Data Analyst') in the headline.

4 **Consistent dates** +0.8
Use one format everywhere; your most common is 'Mon YYYY' (e.g. "Jan 2024"). Change "05/2023" to "May 2023"; "07/2023" to "Jul 2023"; "June 2022" to "Jun 2022".

5 **Repositories are described** +0.7
Add a one-line description to: default_cra_readme, portfolio.

Resume

97 / 100

Checked 11 Oct 2026, 9:09 pm against benchmark resume-2026.10

Resume score 97/100. Biggest gaps: consistent dates. Strong on: exactly one page, consistent fonts, aligned bullets and margins.

Kabir Mehta

+91 98531 23937 | kabirmeh4@gmail.com | github.com/kabirmeh4 | leetcode.com/u/kabirmeh4 | linkedin.com/in/kabirmeh4

EDUCATION

MSOT Institute of Technology — Bengaluru
B.Tech in Computer Science and Engineering — CGPA 8.6/10 — *Jan 2024 – Mar 2024*

Delhi Public School — Bengaluru
Class XII (CBSE) — 91.4% — *05/2023 - 07/2023*

EXPERIENCE

Fintrix Labs — Pune
Software Engineering Intern — *June 2022 – Aug 2022*

- Implemented 6 payment-reconciliation APIs in Spring Boot that processed 40,000 transactions per day.
- Wrote 85 JUnit tests, raising coverage of the billing module from 52% to 81%.

PROJECTS

CropDoc | *Python, PyTorch, OpenCV, Streamlit* | GitHub | Live Demo

- Trained a CNN on 12,000 leaf images to detect 9 crop diseases with 94% validation accuracy.
- Deployed a Streamlit app that farmers' groups used to diagnose 600+ images in the pilot.

ShopLite | *Next.js, TypeScript, Tailwind CSS, Stripe* | GitHub | Live Demo

- Engineered a server-rendered storefront with a cart, Stripe checkout and admin dashboard; Lighthouse score 96.
- Reduced bundle size by 38% through code splitting and image optimization.

DevConnect | *React, Node.js, MongoDB, Socket.io* | GitHub | Live Demo

- Built a real-time developer Q&A platform with JWT auth and WebSocket chat, used by 350+ students in the college.
- Cut median API latency from 480 ms to 120 ms by adding Redis caching and MongoDB indexes.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL
Frameworks: React, Node.js, Express.js, Spring Boot, FastAPI
Databases & Tools: PostgreSQL, MongoDB, Redis, Docker, Git, Linux, AWS
CS Fundamentals: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks

ACHIEVEMENTS & ACTIVITIES

- Ranked 2nd of 140 teams at Smart India Hackathon 2024 (internal round) for a crop-disease detector.
- Solved 450+ problems on LeetCode; contest rating 1780 (top 8%).

3 marked spots on your page. Select one to see the fix.

1 Consistent dates

"05/2023" (MM/YYYY) in Education — Delhi Public School

> May 2023

2 Consistent dates

"07/2023" (MM/YYYY) in Education — Delhi Public School

> Jul 2023

3 Consistent dates

"June 2022" (Month YYYY) in Experience — Fintrix Labs

> Jun 2022

Exactly one page — **12** / 12

Your resume fits on one page.

Recruiters screening campus applicants spend seconds per resume; a fresher resume that runs onto a second page signals poor prioritisation and page 2 is often never read.

Consistent fonts — **3** / 3

Fonts are consistent.

Mixed fonts make a resume look pasted together. One family (two at most) keeps it clean and ATS-safe.

Aligned bullets and margins — **3** / 3

Bullets and entries are aligned.

Misaligned bullets and margins are the first thing a reader's eye catches; they look careless.

Consistent dates

0 / 3

Dates: 3 date formats, mixed range separators ('–', '-').

Dates in different formats or positions make the timeline hard to scan.

- ✎ Use one format everywhere; your most common is 'Mon YYYY' (e.g. "Jan 2024"). Change "05/2023" to "May 2023"; "07/2023" to "Jul 2023"; "June 2022" to "Jun 2022".
- ✎ Use the same separator in every date range, e.g. 'Jan 2024 – Mar 2024' (en dash).

p1 "05/2023" (MM/YYYY) in Education — Delhi Public School

p1 "07/2023" (MM/YYYY) in Education — Delhi Public School

p1 "June 2022" (Month YYYY) in Experience — Fintrix Labs

Spacing and margins

3 / 3

Spacing and margins are consistent.

Consistent spacing and sensible margins make the page look deliberate and keep it printable.

No spelling mistakes

8 / 8

No spelling mistakes found.

A single spelling mistake is a common reason recruiters reject a resume outright.

Grammar, style and tech-term casing

6 / 6

Clean grammar and correctly written tech terms.

Correct casing of technologies (JavaScript, GitHub, Node.js) shows you actually use them.

Every project is complete

16 / 16

3 of 3 projects fully complete (description, tech stack, impact, live link, GitHub).

Projects are a fresher's main evidence. Interviewers want to see what you built, with what, the impact, and proof that it runs (live link) and that you wrote it (GitHub).

GitHub and LeetCode links present — **10** / 10

GitHub and LeetCode are both linked.

Technical recruiters open your GitHub and LeetCode profiles to verify skills; missing links lose that chance.

Co-curricular achievements included — **8** / 8

2 achievements/activities listed.

Hackathons, contests, clubs and certifications differentiate students with similar grades.

Bullets start with action verbs — **7** / 7

10 of 10 bullets start with an action verb (100%).

Bullets that start with action verbs read as achievements, not duties.

Bullets show measurable results — **7** / 7

7 of 8 bullets include a measurable result (88%).

Numbers make impact concrete and believable (users, latency, accuracy, rank).

✎ Add a number to at least half your bullets: how many users/requests, how much faster (ms or %), accuracy, money/time saved, team size, or rank. Estimate honestly if you must ("~200 users").

p1 No number: "Engineered a server-rendered storefront with a cart, Stripe checkout and admin d"

Readable text layer — **4** / 4

Text is selectable and decodes cleanly.

Applicant Tracking Systems read the text layer. If it is missing or garbled, your resume is invisible.

No text inside images — **3** / 3

No text hidden in images.

Text inside images cannot be read by an ATS, so those skills simply do not exist for the filter.

Standard section headings 4 / 4

Uses standard headings.

ATS parsers look for standard headings to file your content under Education, Experience, Projects, Skills.

ATS-safe layout (single column, no tables or icon fonts) 3 / 3

Single column with no tables or icon fonts.

Multi-column layouts, tables and icon fonts are frequently scrambled by ATS parsers.

More suggestions

Rename the file. 'Kabir_Mehta_Resume_final.pdf' looks like a draft. Send it as 'Kabir_Mehta_Resume.pdf'.

Skills for Full Stack Developer. Recruiters for Full Stack Developer roles look for: REST APIs, HTML. If you know them, list them in Technical Skills and show them in a project; if not, these are your next things to learn.

Projects

DevConnect

97 / 100

Repository Live site JavaScript

Desktop, as a recruiter sees it | Phone (390 px)

README with setup steps and screenshots 17 / 20

README scores 17/20.

A README is how a recruiter understands your project in 30 seconds and how anyone can run it.

README has only 62 words — describe what the project does, who it's for and how it works.

Live link opens without errors — **15** / 15

Live site loads cleanly.

A broken live link is worse than none: it is the first thing an interviewer clicks.

✎ Deep links 404 on refresh: add a SPA rewrite (Netlify `_redirects`: `/* /index.html 200`, or `rewrites` in vercel.json).

Live site works on mobile — **5** / 5

Works on a phone-sized screen.

Many recruiters open links on their phone first.

Live site matches what the resume/README claims — **5** / 5

Live page matches the description.

Interviewers check that the link shows the project you describe, not another site.

Readable, well-structured code — **20** / 20

Code quality heuristics: 20/20 across 5 source files.

Interviewers open your main files. Long functions, debug prints and hard-coded URLs signal unfinished work.

No secrets committed — **15** / 15

No secrets found in the code or recent history.

A leaked API key can be abused within minutes of being pushed, and it is an instant red flag in interviews.

Meaningful commit history — **10** / 10

5 of 5 recent commits have meaningful messages.

Commit messages show how you work. 'update' x20 or one 'Add files via upload' suggests copied code.

Clean folder structure — 5 / 5

Clean structure.

A tidy repo is easier to read; committed dependencies and build output look careless.

Tests or CI where reasonable — n/a

Small project — tests are optional.

Even a few tests show engineering maturity, and they're a great interview talking point.

ShopLite

68 / 100

Repository Live site JavaScript

Desktop, as a recruiter sees it | Phone (390 px)

README with setup steps and screenshots — 5 / 20

README scores 5/20.

A README is how a recruiter understands your project in 30 seconds and how anyone can run it.

- ✎ Replace the auto-generated README (Create React App / Vite / Next.js) with your own.
- ✎ Add a 'Getting started' section with the exact commands to install and run it (e.g. `npm install` / `pip install -r requirements.txt`, then the run command).
- ✎ Add 1–2 screenshots or a short GIF of the app working (put them in /docs or /assets).
- ✎ Put the live link at the top of the README: http://127.0.0.1:35099/jserror

Template README is the framework's default template

Live link opens without errors — **10** / 15

Live site has problems.

A broken live link is worse than none: it is the first thing an interviewer clicks.

✎ Open the browser console on your live site and fix the errors shown above (missing files, failing API calls, undefined variables).

JS error — Console error: Failed to load resource: the server responded with a status of 404 (Not Found)

JS error — Console error: Uncaught: undefinedFunctionCall is not defined

Asset — Failed to load http://127.0.0.1:35099/missing-logo.png (404)

Live site works on mobile — **5** / 5

Works on a phone-sized screen.

Many recruiters open links on their phone first.

Live site matches what the resume/README claims — **3** / 5

Live page partly matches.

Interviewers check that the link shows the project you describe, not another site.

✎ Make the live page clearly show the project name and its main feature on the first screen.

Readable, well-structured code — **17** / 20

Code quality heuristics: 17/20 across 1 source file.

Interviewers open your main files. Long functions, debug prints and hard-coded URLs signal unfinished work.

✎ Replace hard-coded localhost API URLs with an environment variable (e.g. VITE_API_URL) — otherwise the deployed site calls your laptop.

Hard-coded URL — src/App.js:1 calls http://localhost

No secrets committed — **15** / 15

No secrets found in the code or recent history.

A leaked API key can be abused within minutes of being pushed, and it is an instant red flag in interviews.

Meaningful commit history — 5 / 10

1 of 2 recent commits have meaningful messages.

Commit messages show how you work. 'update' x20 or one 'Add files via upload' suggests copied code.

- Write messages that say what changed and why, e.g. 'Add JWT login and signup routes' or 'fix(chat): reconnect socket after network drop'.
- Only 2 commits — commit as you build (each feature or fix separately).

Commits — Vague messages: "changes"

Clean folder structure — 5 / 5

Clean structure.

A tidy repo is easier to read; committed dependencies and build output look careless.

Tests or CI where reasonable — n/a

Small project — tests are optional.

Even a few tests show engineering maturity, and they're a great interview talking point.

CropDoc — 87 / 100

Repository | Live site | Python

Desktop, as a recruiter sees it | Phone (390 px)

README with setup steps and screenshots — 17 / 20

README scores 17/20.

A README is how a recruiter understands your project in 30 seconds and how anyone can run it.

- README has only 15 words — describe what the project does, who it's for and how it works.
- Put the live link at the top of the README: http://127.0.0.1:35099/notmobile

Live link opens without errors — **15** / 15

Live site loads cleanly.

A broken live link is worse than none: it is the first thing an interviewer clicks.

Live site works on mobile — **2.5** / 5

Mobile issues: no viewport meta tag (the page renders zoomed-out on phones).

Many recruiters open links on their phone first.

✎ Add <meta name="viewport" content="width=device-width, initial-scale=1">.

Mobile — no viewport meta tag (the page renders zoomed-out on phones)

Live site matches what the resume/README claims — **5** / 5

Live page matches the description.

Interviewers check that the link shows the project you describe, not another site.

Readable, well-structured code — **16** / 20

Code quality heuristics: 16/20 across 3 source files.

Interviewers open your main files. Long functions, debug prints and hard-coded URLs signal unfinished work.

✎ Split long files/functions into smaller ones with clear names (aim for functions under ~40 lines).

✎ Remove 50 leftover console.log/print debug statements (use a logger).

Long function — train.py:1 train() is 102 lines

No secrets committed — **15** / 15

No secrets found in the code or recent history.

A leaked API key can be abused within minutes of being pushed, and it is an instant red flag in interviews.

Meaningful commit history — 7 / 10

2 of 2 recent commits have meaningful messages.

Commit messages show how you work. 'update' x20 or one 'Add files via upload' suggests copied code.

- Only 2 commits — commit as you build (each feature or fix separately).

Clean folder structure — 5 / 5

Clean structure.

A tidy repo is easier to read; committed dependencies and build output look careless.

Tests or CI where reasonable — n/a

Small project — tests are optional.

Even a few tests show engineering maturity, and they're a great interview talking point.

GitHub profile

71 / 100

Checked 19 Sept 2026, 9:10 pm against benchmark github-2026.10

GitHub profile score 71/100.

good_fullstack | dsa-practice | python_ml | default_cra_readme | portfolio

Profile README — 10 / 20

Profile README needs work.

A profile README is the first thing on your GitHub page — use it to say what you build, your stack and your best projects.

- Expand the profile README: what you're focused on, your stack, and links to 2–3 best projects.
- Link your best projects (repo + live demo) from the profile README.

Pinned repositories — n/a

Pinned repos can only be read with a GitHub token; please confirm you have pinned 3+ repos.

Pinned repos are your portfolio; without pins GitHub shows random popular or recent repos.

- Pin your 3–6 best repositories (Profile → Customize your pins). Suggested: good_fullstack, python_ml, dsa-practice, default_cra_readme.

Regular commit activity — **20.8** / 25

Active in 5 of the last 12 weeks (15 contributions, from public events (last 90 days)).

Recruiters look for steady activity. A burst before placements and nothing else looks like cramming.

- You were active in 5 of the last 12 weeks. Aim for at least one meaningful commit every week — small improvements to your projects count.

Profile completeness — **5** / 10

2 profile fields missing.

Name, photo, bio and a link make your profile look owned.

- Add a one-line bio: role + stack (e.g. 'Backend dev · Java · Spring Boot').
- Add your portfolio or LinkedIn URL to the profile.

Repositories are described — **9.3** / 15

3 of 5 repos have a description; 2 have topics.

Descriptions and topics make repos understandable at a glance and searchable.

- Add a one-line description to: default_cra_readme, portfolio.
- Add topics (e.g. react, nodejs, machine-learning) to your main repos.

Original projects (not just forks) — **15** / 15

5 original repos, 1 fork.

Forks and tutorial clones don't show your ability; original repos with real commits do.

LinkedIn

39 / 100

Checked 19 Sept 2026, 9:09 pm against benchmark linkedin-2026.10

LinkedIn scores 39/100. The biggest gains: rewrite the About section around your projects, make the headline name your role and stack and make LinkedIn and your resume agree.

— **Professional profile photo** n/a

Photo not verifiable from the PDF export.

Profiles with a photo get far more profile views and connection accepts; recruiters skip faceless profiles.

✎ We can't see photos in the PDF export. Upload a screenshot of your profile, or confirm you have a photo.

× **Specific headline** **5** / 20

Headline scores 5/20.

The headline is shown next to your name everywhere (search, comments, applications). 'Student at X' tells a recruiter nothing; role + skills + proof does.

✎ State the role you want (e.g. 'Backend Developer', 'Data Analyst') in the headline.

✎ Add your 2–3 strongest technologies to the headline.

✎ Add one proof point: internship, LeetCode count, hackathon rank, or project users.

✎ Ready-to-paste options:

- Full Stack Developer | React · Node.js · CSS | 148+ LeetCode | B.Tech CSE '26 @ MSOT
- Full Stack Developer building with React, Node.js | Ex-Intern @ Fintrix Labs | B.Tech CSE '26
- Full Stack Developer (open to internships) | React · Node.js · CSS | [one proof: hackathon rank / users / LeetCode count]

Current headline: "Student at MSOT Institute of Technology"

About section present and specific

4.5 / 20

About section scores 4/20.

The About section is your pitch. Recruiters read the first 2–3 lines before deciding to scroll.

- ✎ Replace generic phrases (hardworking, passionate, team player) with evidence: what you built and the result.
- ✎ Your About is 93 characters; write 3–5 short sentences (300–1,200 characters).
- ✎ Mention the technologies you actually use (3–6), ideally the ones in your target job descriptions.
- ✎ Add at least one concrete achievement with a number.

Generic phrase: "hardworking"

Experience and projects match the resume

10 / 20

1 mismatch between LinkedIn and your resume.

Recruiters compare LinkedIn with your resume. Missing internships or different dates look like fabrication.

- ✎ Make the dates for 'Fintrix Labs' identical on both.
- ✎ The PDF export omits Projects — make sure LinkedIn lists CropDoc, ShopLite, DevConnect.

Dates — Dates for 'Fintrix Labs' differ: resume [2022] vs LinkedIn May 2025 - July 2025

Skills listed and relevant to target role

7 / 15

3 skills listed; 0% coverage of core Full Stack Developer skills.

Recruiters filter LinkedIn search by skills. Skills that match the role put you in their results.

- ✎ Your top skills include Java, Python, Communication; pin role-relevant ones instead (e.g. JavaScript, TypeScript, React).
- ✎ For Full Stack Developer roles, add (if you have them): JavaScript, React, Node.js, REST APIs, HTML, CSS.
- ✎ Skills on your resume but not on LinkedIn: JavaScript, TypeScript, SQL, React, Node.js, Express.js, Spring Boot, FastAPI — add them.

Top skills: Java, Python, Communication

Custom profile URL 4 / 10

Your URL has an auto-generated suffix.

linkedin.com/in/firstname-lastname looks professional on a resume; random numbers look auto-generated.

✎ Edit your public profile URL to linkedin.com/in/kabir-mehta (Profile → Edit public profile & URL).

linkedin.com/in/kabir-mehta-8f3a91c2

Education and basics complete 5 / 5

Education, location and credentials present.

Campus recruiters filter by college, degree and graduation year.

Headline options

Full Stack Developer | React · Node.js · CSS | 148+ LeetCode | B.Tech CSE '26 @ MSOT Copy

Full Stack Developer building with React, Node.js | Ex-Intern @ Fintrix Labs | B.Tech CSE '26 Copy

Full Stack Developer (open to internships) | React · Node.js · CSS | [one proof: hackathon rank / users / LeetCode count] Copy

About section draft

Copy

I'm a final-year CSE student at MSOT focused on full stack development, mostly with React, Node.js, CSS, JavaScript.

Recent projects: CropDoc — Trained a CNN onleaf images to detectcrop diseases with validation accuracy; ShopLite — Engineered a server-rendered storefront with a cart, Stripe checkout and admin dashboard; Lighthouse score.

During my internship at Fintrix Labs, I implimentedpayment-reconciliation APIs in Spring Boot that processedtransactions per day.

Outside coursework I have solved 148+ problems on LeetCode and rankd 2nd of 140 teams at Smart India Hackathon 2024 (internal round) for a crop-disease detector.

I'm looking for full stack developer internships. Reach me at demo@student.msot.edu.

Skills to add (if you have them)

JavaScript · React · Node.js · REST APIs · HTML · CSS · Git · TypeScript

Coding practice

88 / 100

Checked 11 Oct 2026, 9:10 pm against benchmark coding-2026.10

Coding practice score 88/100.

~ **Problems solved** — **30.1** / 40

212 problems solved.

Most campus coding rounds are DSA problems; volume of practice is the best predictor of clearing them.

✎ 212 solved is good; push to 300 with more medium problems.

✓ **Difficulty mix** — **20** / 20

98 easy, 96 medium, 18 hard.

Interview problems are mostly medium; only-easy practice doesn't transfer.

✓ **Contest participation** — **20** / 20

4 contests attended, rating 1612.

Timed contests build the speed you need in online assessments.

✎ Take part in weekly LeetCode or Codeforces contests (aim for 5+), then upsolve the problems you missed.

– **Consistent recent practice** — n/a

No activity data (manual entry).

Steady practice beats last-minute cramming before placement season.

Co-curricular achievements

100 / 100

Checked 11 Oct 2026, 9:10 pm against benchmark achievements-2026.10

4 achievements across 4 categories.

Co-curricular achievements **100** / 100

4 achievements across 4 categories.

Hackathons, contests, leadership and certifications separate students with similar grades.

✎ Add evidence of: a relevant certification (NPTEL/AWS/Google); an open-source contribution (Hacktoberfest, GSoC).

Ranked 2nd of 140 teams at Smart India Hackathon 2024 (internal round) for a crop-disease detector.

Solved 450+ problems on LeetCode; contest rating 1780 (top 8%).

Finalist (top 10 of 140 teams) at Smart India Hackathon 2025 internal round

Web lead, MSOT Coding Club: organised 5 workshops for 300+ students
